

u-Cube

About this product

The cube is based on the proven “inertia separation” principle.

The internal V-shaped filter cavities allow the creation of a venturi effect and force the flow of particulate-laden air to change direction.

Thanks to it we get the most optimal air flow and maximum possible filtration efficiency.

Applications

- **Automotive Paint Booths:** capturing overspray generated during the painting process.
- **Industrial Coating and Finishing:** trapping paint and coating particles.
- **Woodworking and Furniture Manufacturing:** controlling overspray and removing particulates generated during staining, varnishing, and painting processes.

Specifications

Loader:

At first, the Loader will filter 74% of the paint.

Catcher:

Then, the Catcher will stop 24% of the extra paint thanks to its polyester filter.

Perfector:

And finally, the Perfector will sharp the last particles to have a 99,8% pure air
